Enabling context-aware applications

Per-Oddvar Osland, Telenor R&D

ICIN 2006

Outline

- **Context – brief introduction**
- Akogrimo* IST Project
- Context handling in Akogrimo
- Conclusions and outlook

* Akogrimo is a project funded by the EC under the FP6-IST programme

What is your context?

environment

schedule

availability

location

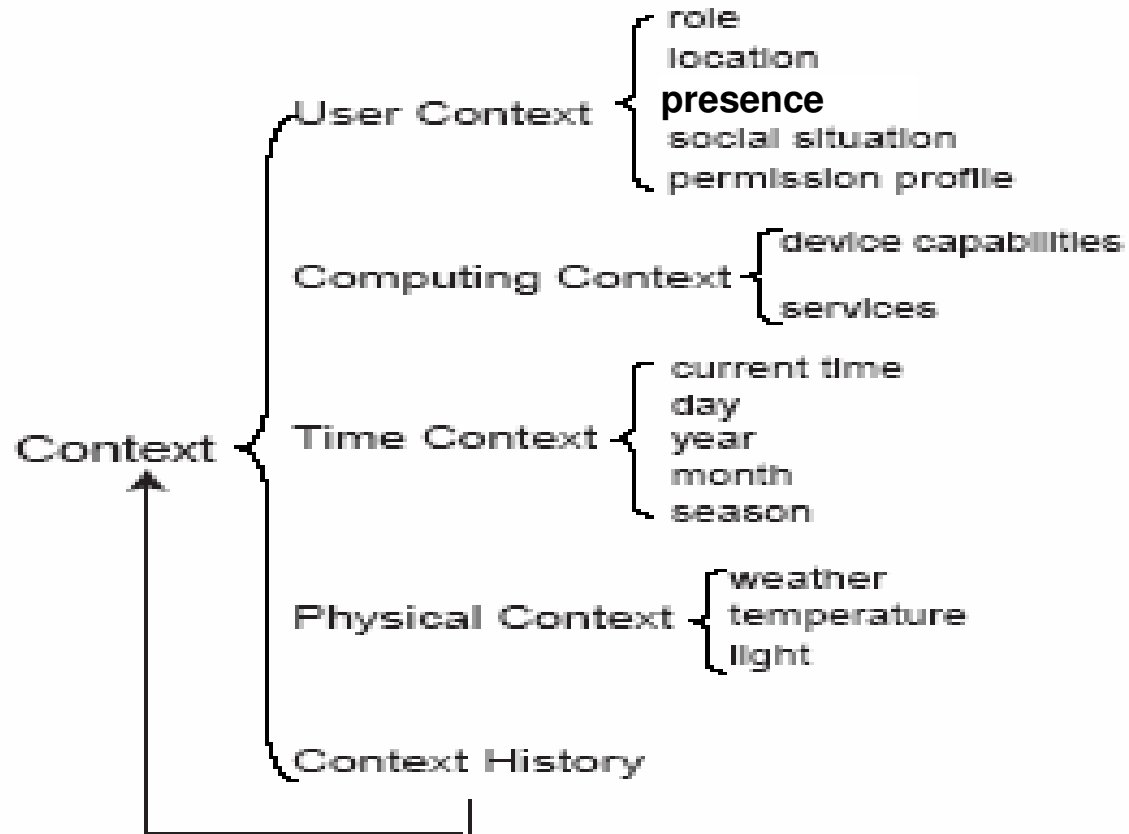

mood

Context awareness is vital to pervasive applications

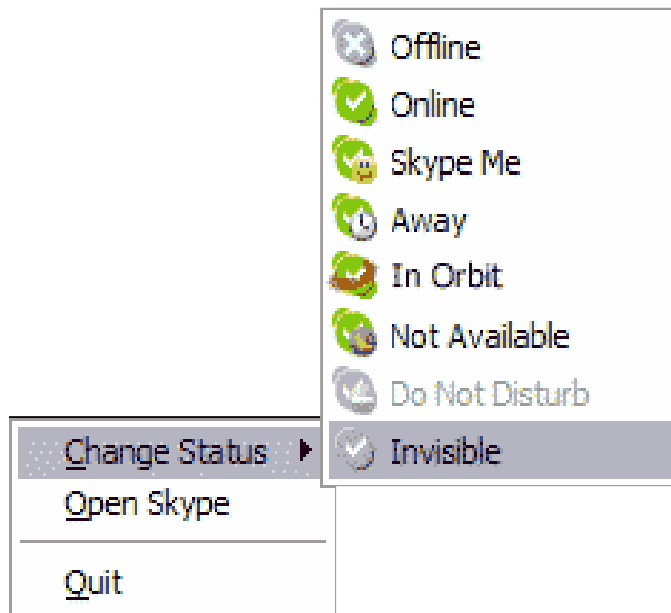

Context – general model

(Mostéfaoui 2003)

User Context - Presence

- Availability

- Mood

User context - Location

- Coordinates

- Latitude/longitude/altitude
44 50' N, 0 34' W
- Universal Transverse Mercator
Zone 30T, 4 967 316 m N, 692 339 m E

- Geographical

- Country: France
- Area: Aquitaine
- City: Bordeaux

Per-Oddvar Osland, Telenor R&D

- Descriptive

- In the slopes
- On a sunny beach
- Conference area

- Building plan

- Building A
- Fifth floor
- Room A 506

ICIN 2006

Computational context

- Office

- Operating room

Physical context

- Weather, temperature, humidity, light conditions, ...

Outline

- Context – brief introduction
- **Akogrimo IST Project**
- Context handling in Akogrimo
- Conclusions and outlook

Akogrimo IST Project

- Access to Knowledge through the Grid in a mobile World
- Funded by the EC under FP6-IST.
- Duration: July 2004 – September 2007
- www.mobilegrids.org

Summary

- Grid services, pervasively available, are meeting the needs of fixed, nomadic and mobile users

Key Scenarios

- ehealth
- eLearning
- Crisis management

Akogrimo partners

Telecom Operators & Research

- Telefónica Investigación y Desarrollo, Spain
- Instituto de Telecomunicações, Portugal
- Rechenzentrum der Universität Stuttgart RUS, Germany
- Telenor, Norway
- Universidad Politécnica de Madrid, Spain
- Universität Zürich, Switzerland

Tool Provider / Business Models / Applications

- University of Hohenheim, Germany
- BOC Asset Management GmbH, Austria

GRID Infrastructure & Research

- Höchstleistungsrechenzentrum der Universität Stuttgart HLRS, Germany
- Institute of Communication and Computer Systems, Greece
- Council for the Central Laboratory of the Research Councils, UK
- Centro di Ricerca in Matematica Pura ed Applicata, Italy

Grid & IT Industry

- DATAMAT S.p.A., Italy
- ATOS ORIGIN, Spain

Akogrimo in a Nutshell

Classic Grid:

- Complex problem solving (weather forecast, car crash simulations, flow calculations)

Key Akogrimo characteristics (with examples from eHealth)

- Complex problem solving in a mobile setting, focus on end users
- Resources
 - Information (patient journal, medication plan)
 - Advanced services (analysis of medical data, translator service, ...)
 - Local services (ambulance, hospital, medical equipment, communication tools)
 - Human resources (doctor, nurse, rescue personnel, ...)
- Grid has mechanisms for
 - manage complex problem solving (Workflow)
 - handling resources (Virtual organization)

More info

Outline

- Context – brief introduction
- Akogrimo IST Project
- **Context handling in Akogrimo**
- Conclusions and outlook

Context handling – Design choices

Depends on the application domain

Context is open-ended;
No unique model

Akogrimo provides a context infrastructure for managing fundamental user context based on scenarios

Context cannot be completely specified for all purposes

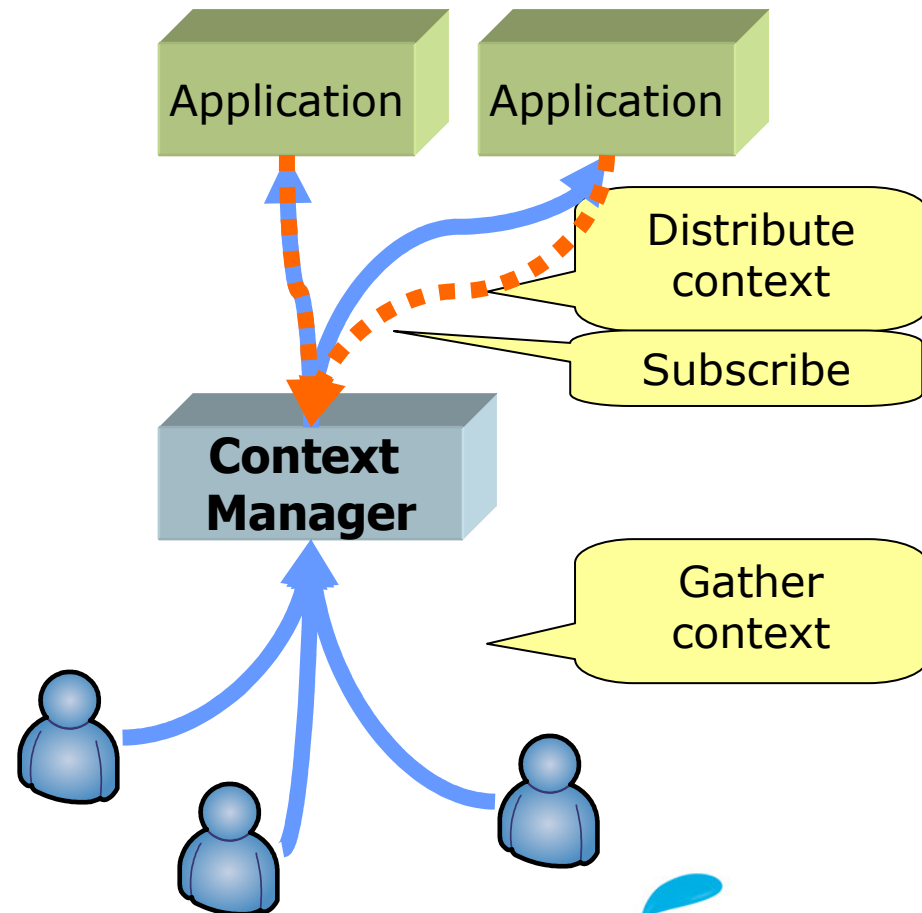

Context handling – Design choices ...

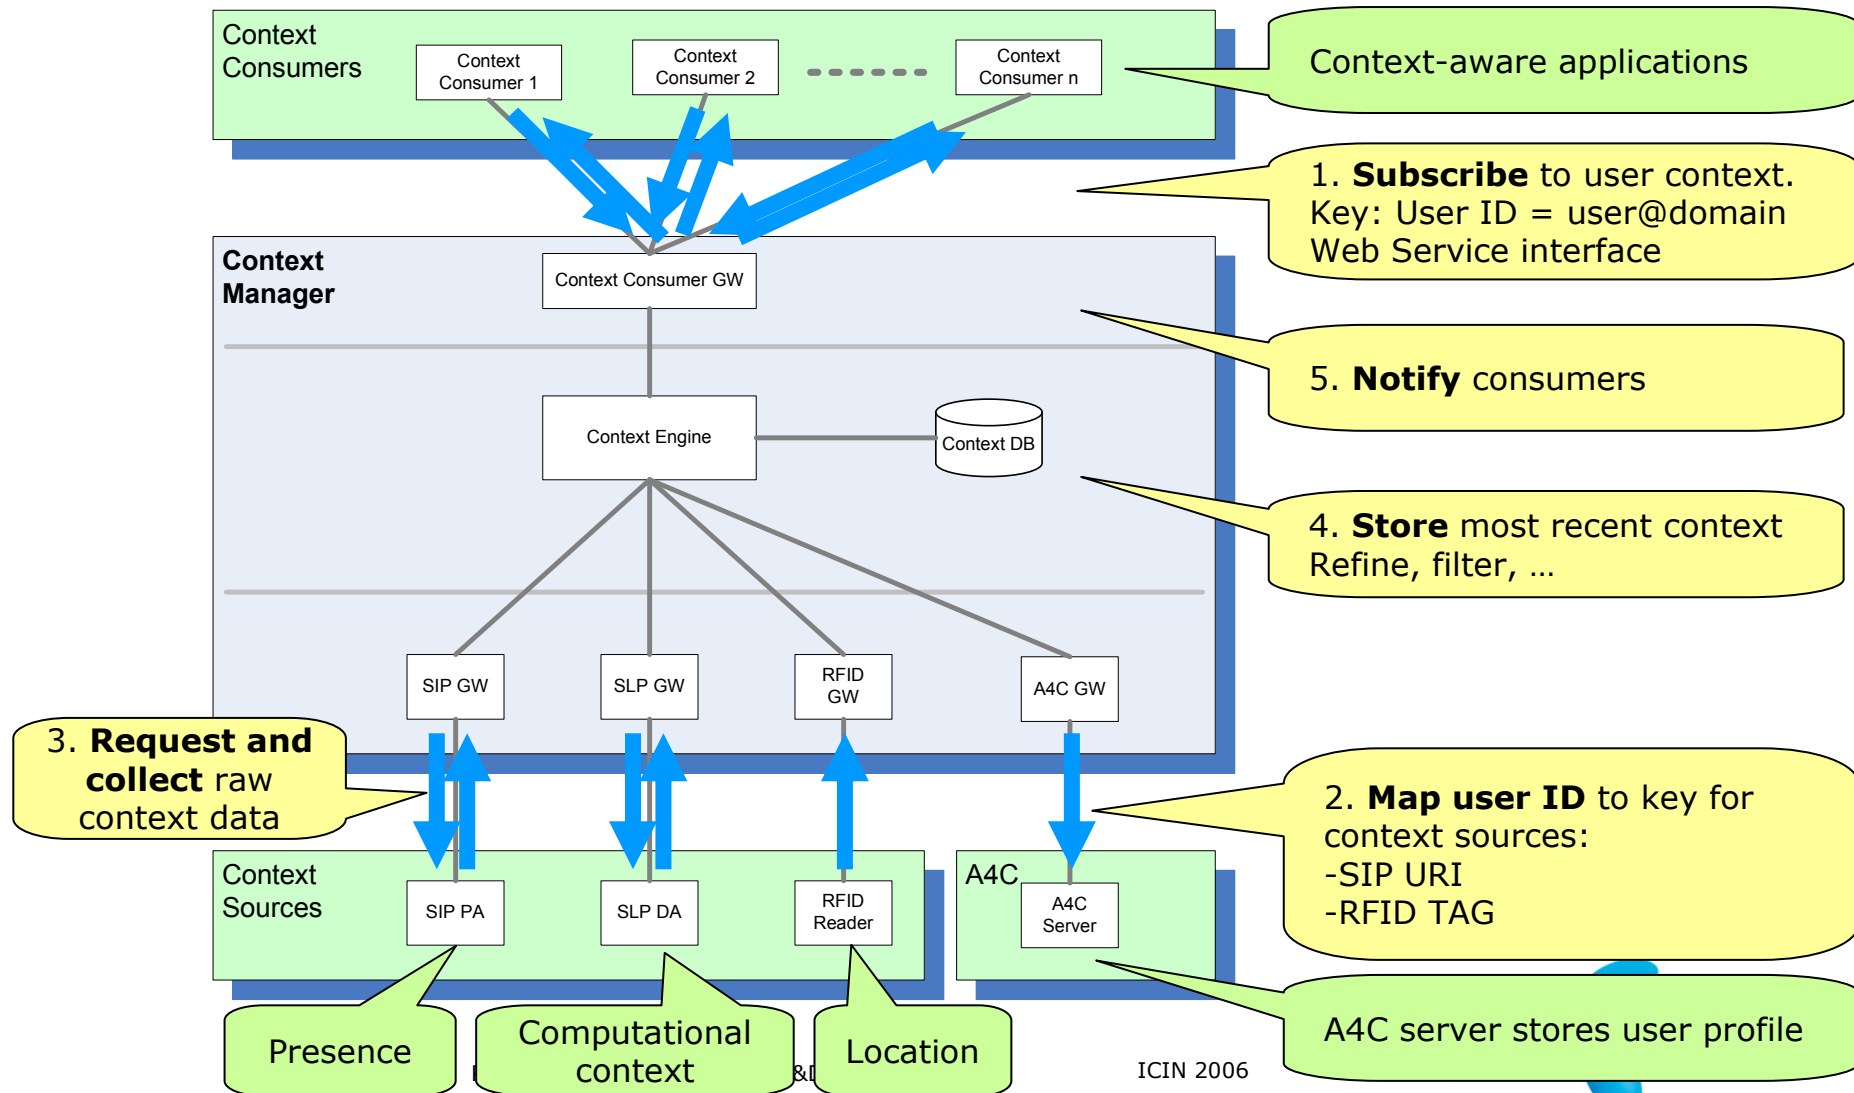

- User-centric context model
- Context handling separated from service logic
 - Should not contain service logic (i.e. no inference)
 - Must support several applications
- Flexible w.r.t. adding context sources

Context Manager

- Purpose: Proof of concept / demo
- Acts as middleware for context-aware applications
- Basic operations
 - Handle subscriptions
 - Gather and distribute context
 - Refine raw context

Context Manager Architecture

Context Manager Implementation

- Language:
 - Mostly Java 1.5
 - C/C++ for parts of SLP, RFID
- DB: MySQL
- Interfaces:
 - Context Consumers: Web Service interface, context repr. in XML
 - Presence: SIP SIMPLE
 - Computational Context: Service Location Protocol (SLP)
 - Location: Proprietary interface to RFID systems
 - A4C: Diameter
- OS:
 - Linux Ubuntu
 - Runs on Windows (but excludes SLP, A4C)

Demonstrated use of Context

eHealth scenario: Combined presence, location, and computational context

Conclusions and outlook

Conclusions

- Context awareness vital in pervasive applications
- Context Manager, part of Akogrimo IST project, is an enabler for context-aware services
- Design guidelines
 - User-centric context model
 - Context handling separate from service logic
 - Flexible w.r.t. context sources
- Use of Context Manager demonstrated in eHealth scenario

Outlook

- Introduce ontologies:
 - Enhanced interface for context consumers
 - Improved support for context filtering
- Add context sources
- Context mapping
- Scalability and performance
- Privacy and security
- Context - reliable information?

Thank you!
